Height : 3' à 16'		
PTC225	2 1/4" x 2 1/4"	
Height : 3' à 16'		

Why use an anchor during installation?

This system is for areas that require frequent replacements due to damaged sign posts.

The post is installed at the top portion of the anchor [by sliding the post inside the anchor] allowing crews to work at ground level.

The ULTIMATE® post system is compatible with all existing square posts.

Benefits

- Doubles the thickness of the post
- Reinforces the post, preventing it from bending on impact.
- Safe and easy installations.
